## CASE STUDY REPORT

### **Data Analytics with Power BI**

Real-Time Analysis of Bank customers (Data Analytics with power BI)

## **ABSTRACT**

In the banking sector, data analysis involves using fashionable special effects and modern tools to explore data. The utilization of such modern research methods has been increasing rapidly and widespread throughout the nation. The main objective is to bring customer satisfaction features a positive response on customer loyalty within the banking system, especially with the income improving, the connection between them becomes more and more strong. Finally, the banking systems mainly focus on customer satisfaction and the ways to increase customer loyalty. They are constantly working on the ways to strengthen their business benefits like proper product promotion to the customers and to reduce the improper functioning of online bank applications and so on.

## **CHAPTER:1**

### **INTRODUCTION**

Overview of the importance of real-time analysis in the banking sector.

Introduction to the case study focusing on the application of real- time analysis in understanding bank customer behaviour.

### **BACKGROUND**

Explanation of the banking industry's shift towards data-driven decision making.

Importance of real - time data analysis in providing personalized banking experiences.

### **OBJECTIVE**

Clear statement of the objectives of the case study, such as improving customer satisfaction, reducing churn, or increasing cross – selling opportunities.

## CHALLENGES

Handling large volumes of diverse data from multiple sources, including transaction histories, demographic information, and digital interactions.

Ensuring data privacy and compliance with regulatory requirements.

Implementing a scalable and efficient real- time analytics solution.

Developing algorithms to predict customer behaviour and preferences accurately.

Strategies and solutions for overcoming these challenges such as data governance frameworks, cloud – based architectures, or collaboration with fintech partners.

## METHODOLOGY

### DATA COLLECTION:

Swift bank collects data from various sources, including transaction history, customer demographics, online interactions, and feedback.

## REAL-TIME DATA PROCESSING:

The collected data is processed in real-time using advanced analytics and machine learning algorithms.

## CUSTOMER SEGMENTATION:

Based on transaction patterns, demographics, and behaviour, customers are segmented into different groups for targeted marketing and personalized services.

## REAL-TIME DECISION MAKING

Swift bank uses real – time insights to make decisions on product recommendations, risk management, fraud detection, and customer service.

## CONTINUOUS IMPROVEMENT

The bank continually refines its models and algorithms based on feed back and evolving customer preferences.

## ADVANTAGES

**IMMEDIATE FRAUD DETECTION:** Real-time analysis can quickly identify suspicious transactions, enabling banks to react promptly to potential fraud attempts and protect their customer's accounts.

**PERSONALIZED OFFERINGS:** By analysing customer behaviour in real time, banks can tailor their offerings and promotions to individual preferences, enhancing customer satisfaction and loyalty.

**RISK MANAGEMENT:** Real-time analysis allows banks to assess risk factors associated with customer activities promptly, enabling them to make informed decisions to mitigate risks effectively.

**ENHANCED CUSTOMER SERVICE:** banks can provide timely assistance and support to customers by analysing their interactions in real-time, leading to improved overall customer experience.

**OPERATIONAL EFFICIENCY:** Real-time analysis streamlines operational processes by identifying bottlenecks or inefficiency promptly, allowing banks to optimize their resources and improve productivity.

**COMPETITIVE ADVANTAGE:** Banks that leverage real-time analysis gain a competitive edge by staying ahead of market trends, responding swiftly to changing customer needs, and offering innovative solutions.

**REGULATORY COMPLIANCE:** Real-time analysis helps banks ensure compliance with regulatory requirements by monitoring transactions and detecting any potential violations promptly.

**FRAUD PREVENTION:** By continuously monitoring customer activities, real-time analysis can proactively identify patterns indicative of fraudulent behaviour, helping banks prevent financial losses and protect their reputation.

## FEATURE

**REAL TIME ANALYSIS:** The dashboard will provide real-time analysis of customer data.

**TREND ANALYSIS:** The dashboard will identify and display trends in customer behaviour.

**PREDICTIVE ANALYSIS:** It will use historical data to predict future customer behaviour.

## SCOPE

Analytics plays a vital role in the banking sector, transforming traditional practices and guiding strategic decision-making. Through the use of advanced data analysis techniques, banks can effectively manage risks, detect fraud, understand customer behaviour, enhance operational efficiency, ensure regulatory compliance, and innovative product offerings. By leveraging banking analytics can uncover new growth opportunities, improve customer satisfaction, and achieve sustainable success in an increasingly data world.

## **CHAPTER 2**

### SERVICES AND TOOLS REQUIRED

Services used:

Data streaming platforms: Services like Apache Kafka, Amazon kinesis, or google cloud Pub/sub facilitate the ingestion and processing of real-time data streams from

various

sources, including transactional systems, customer interactions, and external data feeds.

Real-time Dashboards and visualization tools: services like Tableau Power BI, or Google Data Studio provide interactive dashboards and visualizations that enable banks to monitor key metrics, track performance and gain actionable insights from real-time data analysis.

API Integration Platform: Banks leverage API integration platforms like IBM API connect to integrate real-time data from internal systems, third- party providers, and external sources, enabling seamless data exchange and interoperability.

## TOOLS AND SOFTWARE USED

### TOOLS

POWER BI: the main tool for this project is power BI which will be used to create interactive dashboards for real-time data visualization.

**POWER QUERY:** This is a data connection technology that enables you to discover, connect, combine, and refine data across a wide variety of sources.

## SOFTWARE REQUIREMENTS

**POWER BI DESKTOP:** This is a windows application that you can use to create reports and publish them to Power BI.

**POWER BI SERVICE:** This is an online SaaS(Software as a service) service that you use to publish reports, create new dashboards and share insights.

**POWER BI MOBILE:** This is a mobile application that you can use to access your reports and dashboards on the go.

## **CHAPTER:3**

### PROJECT ARCHITECTURE

**DATA COLLECTION:** real time customer data is collected from various sources like bank transactions, customer interactions, etc. this could be achieved using services like Azure Event Hubs or AWS kinesis.

**DATA STORAGE:** The collected data is stored in a database for processing. Azure SQL Database or AWS Kinesis.

**DATA PROCESSING:** The stored data is processed in real-time using services like Azure Stream Analytics or AWS Kinesis Data Analytics.

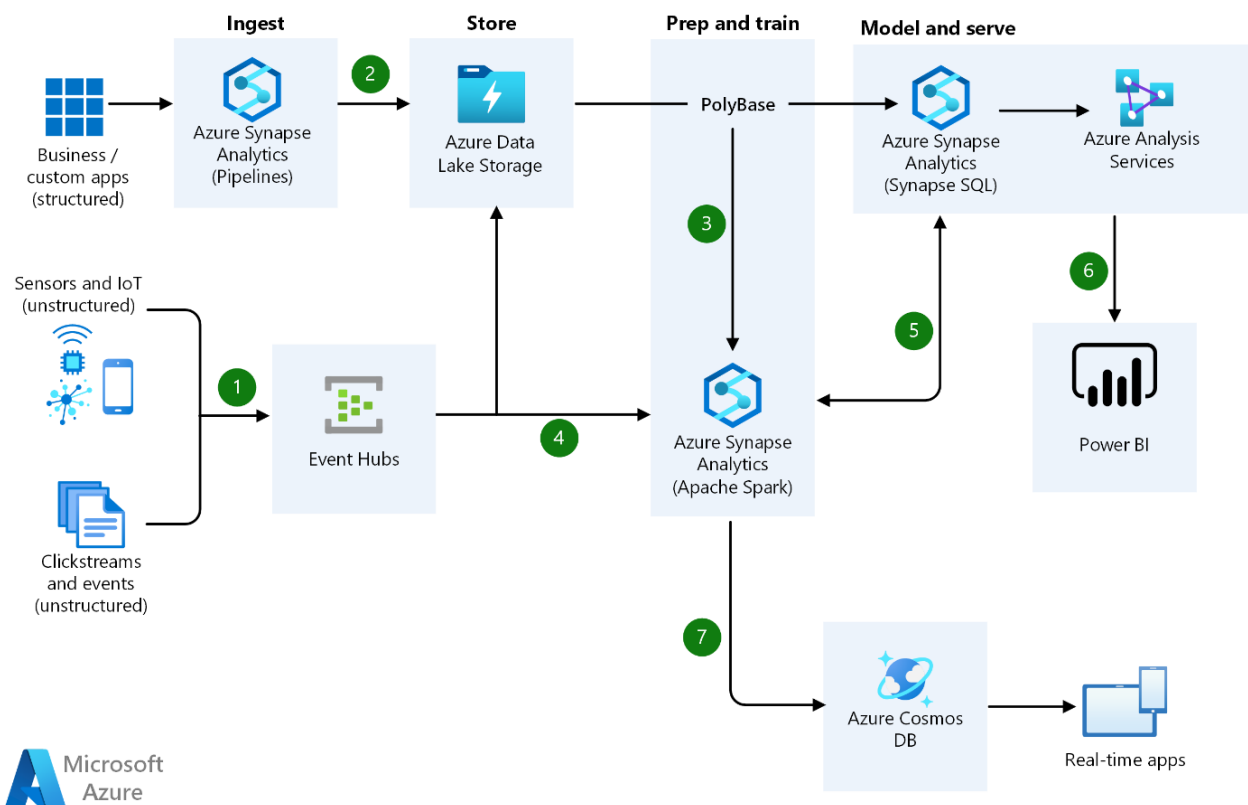

**MACHINE LEARNING:** Predictive models are built based on processed data using Azure Machine Learning or AWS Sage maker. These models can help in predicting customer, detecting fraud etc.

**DATA VISUALIZATION:** The processed data and the results from the predictive models are visualized in real-time using Power BI. Power BI allows you to create interactive dashboards that can provide valuable insights into the data.

**DATA ACCESS:** The dashboards created in Power BI can be accessed through power BI Desktop, powerful service (online) and Power BI Mobile.

## Project architecture:

## CHAPTER :4

### MODELING AND RESULT

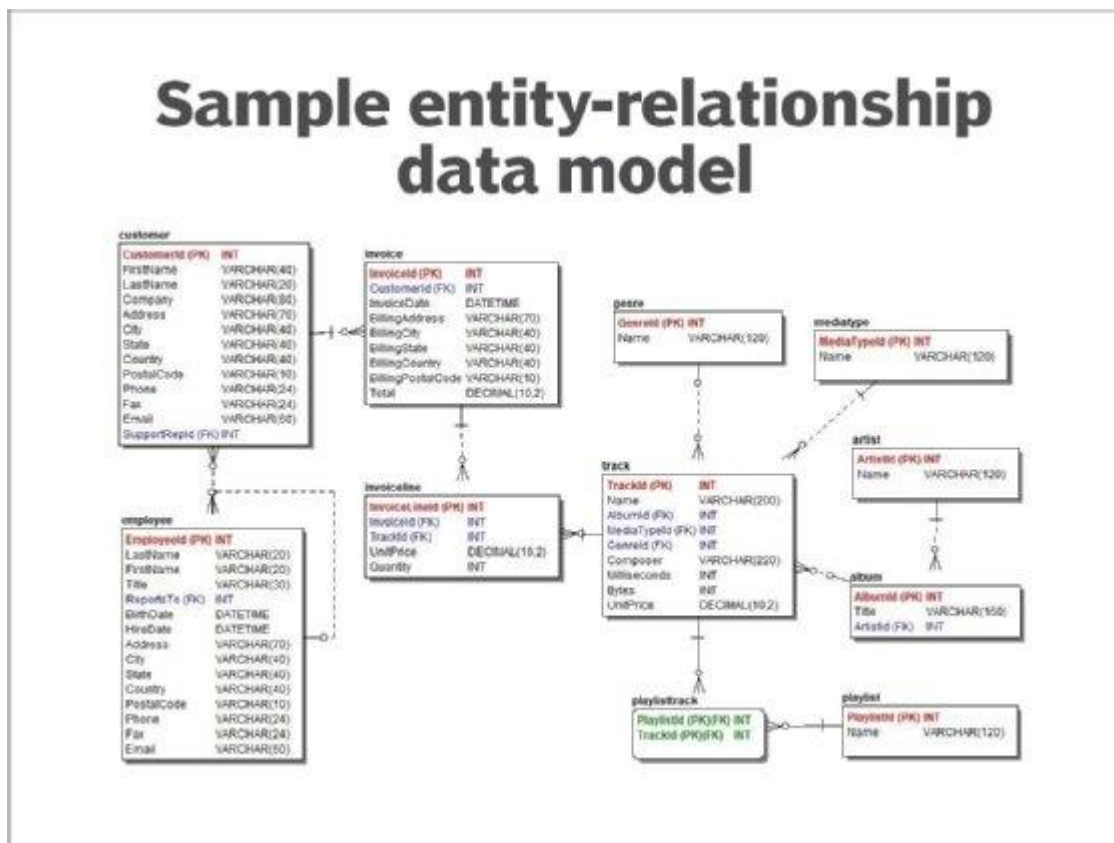

#### Manage relationship

This is a sample of entity relationship data model

STUDENT: Attributes could include student ID, name, address, date of birth, etc.

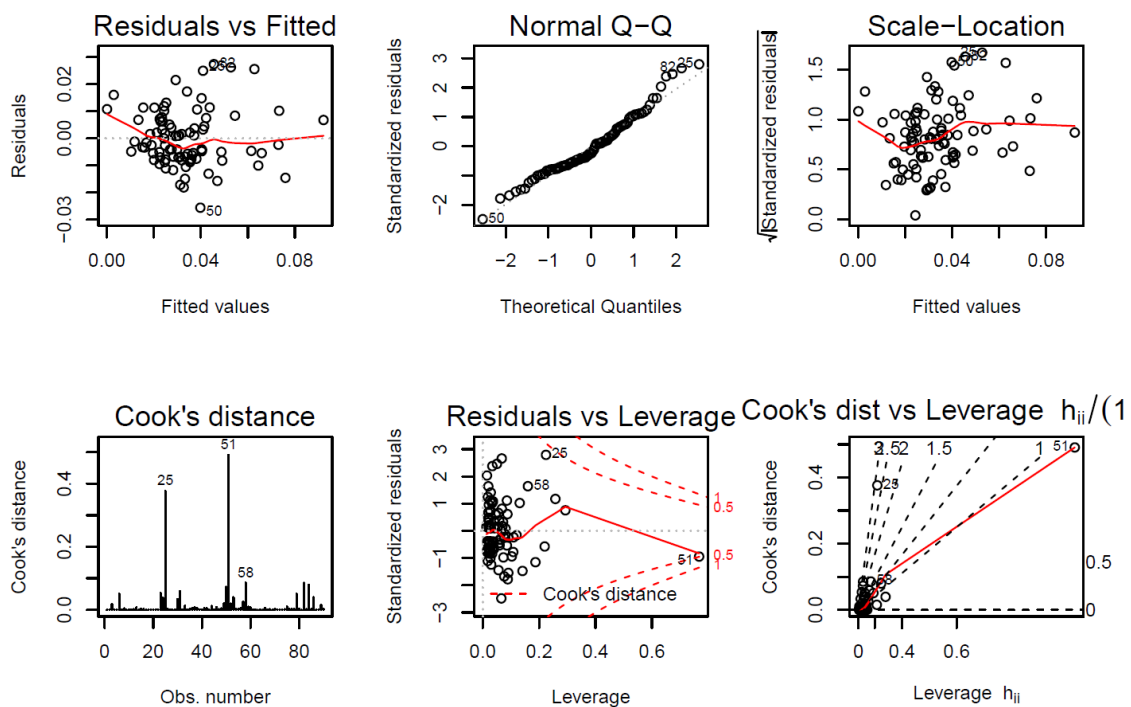

COURSE: Attributes should include course Id Account ID, Amount, payment.

This is a modelling and result for residual vs fitted in fitted values, theoretical quartiles, scale-location leverage, cook's distance vs leverage.

## BETWEEN AGE AND GENDER

This is a result between age and gender from age 7years to 11 years and gender- female and male.

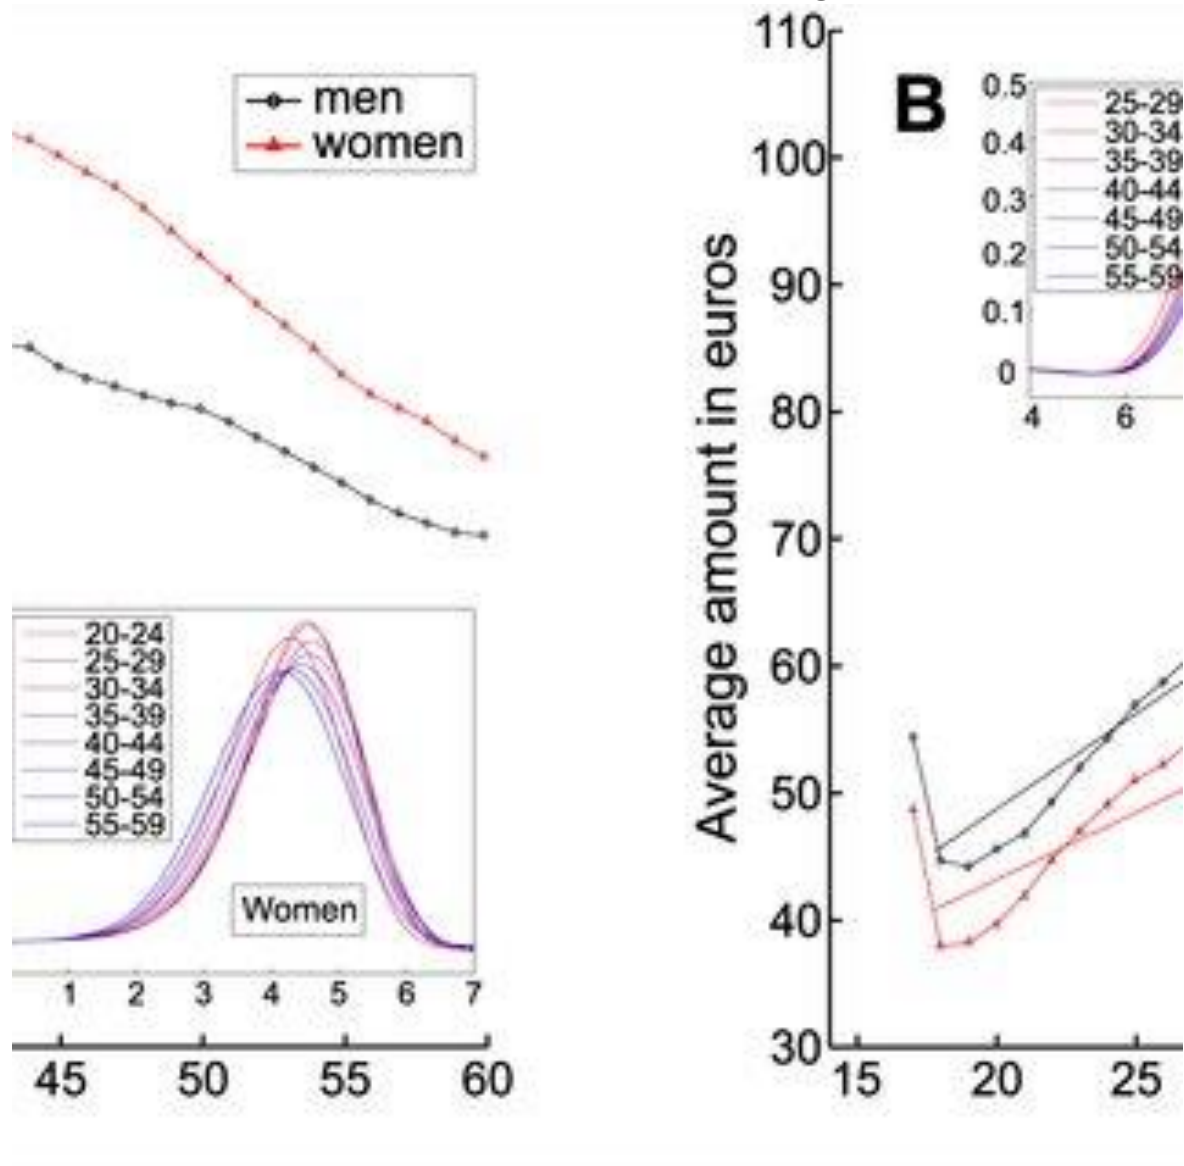

(N=880)

			Gender		Total
			Female	Male	212
<b>Age</b>	7 y.o.	No	106	106	
		% . Age	50%	50%	100%
	8 y.o.	No	132	122	254
		% . Age	59,3%	40,7%	100%
	9 y.o	No	67	88	155
		% . Age	36,0%	64%	100%
	10 y.o	No	96	93	189
		% . Age	52,2%	47,8%	100%
	11 y.o	No	37	33	70
		% . Age	62,3%	37,7%	100%
<b>Total</b>		No	438	442	880
		% . Age	49,9%	50,1%	100%

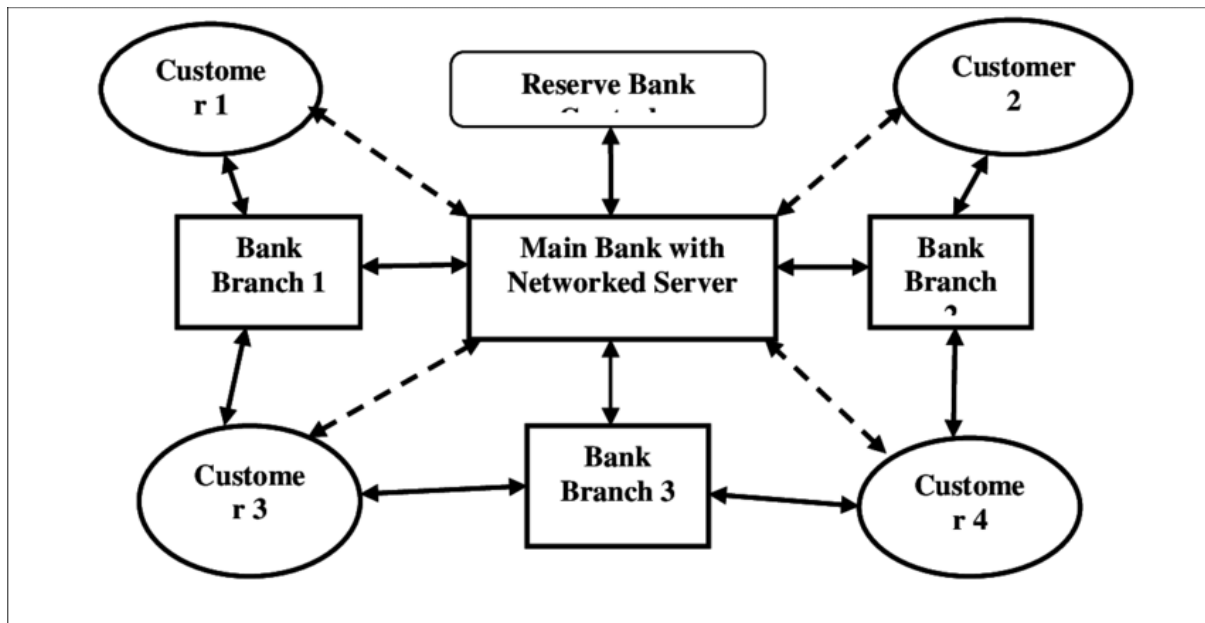

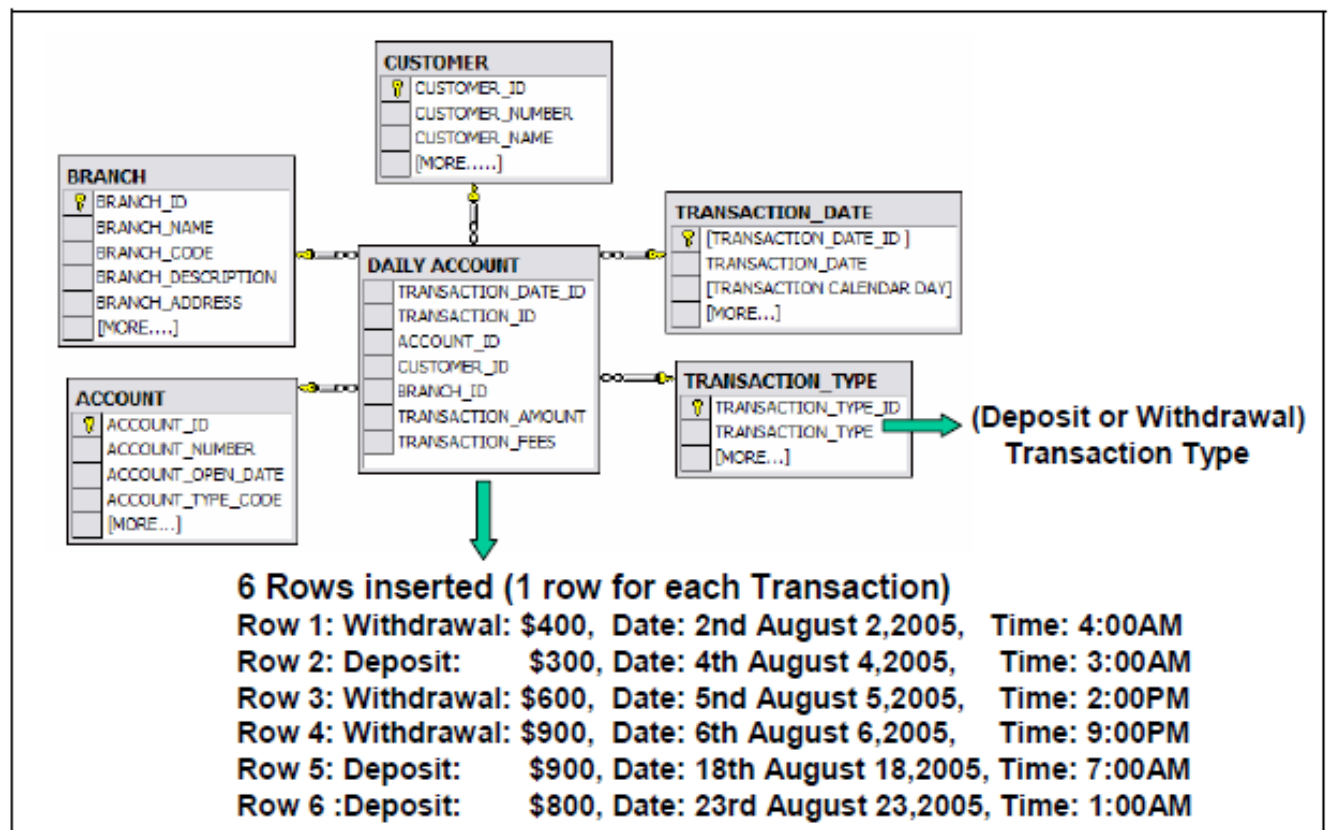

This is between men and women of average amount in euros

## CONCLUSION

In conclusion the real time analysis of bank customers revealed valuable insights into the behaviours and preferences. Through continuous monitoring and analysis, we identified patterns in transactions volumes, peak hours, preferred channels, and customer demographics. These insights enable the bank to optimise resource allocation, tailor marketing strategies, and enhance customer experiences. Recommendations include implementing personalised marketing campaigns, improving digital banking services, and offering targeted promotions to segments with specific needs. By leveraging real -time data analytics, the bank can stay competitive, adapt to evolving customer demands, and foster long-term relationships with its customers.

## FUTURE SCOPE

Improving products and services through big data. Building a great experience is already the main focus of big data research for 65% of bank executives. This is in large part because banks are up to 70% more likely to sell services to existing clients and big data can be the key to unlocking its potential. The future scope of real-time analysis of bank customers is characterised by continuous innovation driven by advances in technology, data analytics, and customer-centricity. By embracing these opportunities, banks can unlock new levels of efficiency, competitiveness, and customer value in the digital age.
